

Irrigation webinar series

Webinar 3: Understanding and managing water price variability on farm

This webinar will discuss ways of better managing water price variability and reducing farm business shocks in years with high water prices. Information provided will assist irrigators to better prepare for the future.

TOPICS

- Better understanding southern Murray-Darling Basin water market behaviour
- The impact of key water market drivers on water prices in wet, average and dry seasons
- Pros, cons, economics and tips for using different water products
- Costing water ownership versus purchasing allocation
- Smart water allocation purchasing strategies

EXPERT SPEAKER

Daryl Poole. Associate. RMCG

Daryl has worked in the water industry for over 20 years. He works closely with irrigators, helping them develop water risk management strategies.

WHEN

Thursday 25 February 2021, from 1-2 pm.

HOW TO REGISTER

To register in advance for this webinar, go to bit.ly/AgVicWMW3 After registering, you will receive a confirmation email containing important information about joining the webinar. For technical issues, please call John Paulet on 0429 158 500.

MORE IRRIGATION WEBINARS TO COME

Irrigation webinars are currently being held monthly. The initial focus of the webinar series is on water trade. The next few webinars will cover topics including lessons from leading producers about farm water management and the effect of climate change on future irrigation water availability. As well as getting the most out of carryover water.

SUPPORT

This webinar is brought to you by the Sustainable Irrigation Program, a partnership between Agriculture Victoria, Catchment Management Authorities, the Department of Environment Land Water and Planning and Rural Water Corporations.
