^Export figures need to be used with caution. Some grain, forestry, TCF and animal feed exports are affected by confidentiality agreements.

*\$ change and % change based on the difference between 2020-21 and 2021-22 data. Volumes are shown in gross weights.

**Prepared foods are classified as those which have been substantially transformed from their raw product basis and may have input from more than one food production industry

DEFINITIONS AND DATA

DEFINITIONS

This report refers to ‘food exports’ as those products considered suitable for consumption by humans. This classification is made by the Department of Energy, Environment and Climate Action (DEECA) based on the Australian Harmonized Export Commodity Classification (AHECC) code descriptions.

DEECA refers to ‘fibre exports’ as those of wool and other animal fibre products, including skins and hides, forestry products and textile, clothing, and footwear (TCF).

The DEECA classification excludes items such as:

- live animals for breeding purposes
- grains and horticultural products for cultivation
- live ornamental plants, and
- bovine semen.

The DEECA classification includes items such as:

- live animals for purposes other than breeding
- fresh, chilled, frozen and preserved meats and seafood
- dairy and horticultural items for human consumption
- unprocessed grains and pulses
- edible animal by-products
- wine and related products
- wool and other fibres in various forms
- skins and hides from agricultural livestock, and
- prepared foods derived from agricultural commodities.

State of Origin defines the Australian state in which the final stage of production or manufacture occurs (ABS 5489.0

- International Merchandise Trade, Australia, Concepts, Sources and Methods).

State of Loading is the Australian state in which the goods are loaded onto an international carrier for export. Subject to any confidentiality restrictions, this can be further disaggregated to provide information about particular air or seaports in the relevant state (i.e., Port of Loading).

Classification of forest products is based on those used by ABARES in the Australian Forest and Wood Products Statistics publication.

Classification of wool products is based on the AWEX Sheep Breed Compendium, 2010.

The regional classification of North Asia comprises China, Hong Kong, Japan, Macau, Mongolia, South Korea and Taiwan.

The regional classification of South East Asia comprises Brunei Darussalam, Cambodia, East Timor, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand and Vietnam.

The regional classification of MENA comprises Algeria, Bahrain, Egypt, Iraq, Iran, Israel, Jordan, Kuwait, Lebanon, Libya, Morocco, Oman, Qatar, Saudi Arabia, South Sudan, Sudan, Syria, Tunisia, Turkey, UAE and Yemen.

The regional classification of North America comprises the United States, Canada and Mexico.

The regional classification of South Asia comprises Afghanistan, Bangladesh, Bhutan, India, Maldives, Nepal, Pakistan and Sri Lanka.

DATA

The information in this document is based on statistics compiled by the Australian Bureau of Statistics (ABS) from information submitted by exporters and their agents to the Department of Home Affairs (Home Affairs). The data has been sourced from IHS Markit, Global Trade Information Services (GTIS), which compiled the information for DJSIR and DEECA.

Valuation of exports is based on the free on-board transaction value of the goods, expressed in Australian dollars. Values within this publication have been aggregated on a financial year basis. State aggregations are by State of Origin rather than by State of Loading.

Gross weight refers to the shipping weight of goods (measured in tonnes) in the packaged state, excluding the weight of containers. For exports, details of gross weight are available for each commodity.

Restrictions are placed on the release of statistics for some products for reasons of confidentiality. These restrictions may impact on the total aggregated value of exports from Victoria. Alternatively, they may only affect country and commodity details for that export category. Of relevance to Victoria's food and fibre exports are confidentiality restrictions on specific grain, forestry, textile, clothing, and footwear (TCF) and animal feed product exports including some barley, oats, lupins, canola, beer, pasta and woodchips, products for which no state of origin or export destination details are available.

DEECA uses the AHECC codes for export and import analysis (www.abs.gov.au, Classification 1233.0). These codes concur with international commodity codes, allowing direct import and competitor analysis. Commodity classification also provides greater detail and allows analysis of products from different sectors of the supply chain. These codes enable DEECA to focus on specific fresh and processed export products within industry sectors.

The ABS Australia's international merchandise trade statistics are subject to revision after they are initially published. Although the revisions made are typically quite small as a proportion of the monthly international merchandise trade results.

Revisions may arise because:

- an amending entry is supplied to the Department of Home Affairs
- errors are identified and corrected by the ABS after initial processing errors are identified through queries from statistical users about the published data
- time series are recompiled because of major changes to classifications, concepts, sources or methods (www.abs.gov.au, Classification 5489.0).

The Consumer Price Index rose 6.1% over the 12 months to the June 2022 quarter - the fastest annual increase in 21 years driven primarily by the increasing cost of food and fuel. In the June 2022 quarter, food prices increased 5.9% compared with the June quarter 2021.

The Australian dollar weakened relative to the US dollar in 2021-22. This was likely to have assisted the competitiveness of Australian exports in the international market.
